DETAILED ACTION

In response to the appeal brief filed 7/19/2004, the case is withdrawn from appeal and all pending claims 37-56 are allowed. The following is an examiner's statement of reasons for allowance:

There is not taught or disclosed in the prior art a method or system including the particular gain elements as claimed where the output transmitted from the partially reflective component goes to a Raman amplifier to generate a substantially flat Raman gain across at least one telecommunications band.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments filed 7/19/2004 have been fully considered and are persuasive.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lowenthal et al. (US 6,612,703) discloses a plurality of groups of multiple gain elements and the other features similar to the claimed invention, but there is no suggestion that the output of the system may be used to pump a Raman amplifier to generate substantially flat Raman gain across a telecommunications band.
